

Low Current Seven Segment Displays

Data Sheet

Description

These low current seven segment displays are designed for applications requiring low power consumption. They are tested and selected for their excellent low current characteristics to ensure that the segments are matched at low currents. Drive currents as low as 1 mA per segment are available.

Pin for pin equivalent displays are also available in a standard current or high light ambient design. The standard current displays are available in all colors and are ideal for most applications. The high light ambient displays are ideal for sunlight ambients or long string lengths. For additional information see the 7.6 mm Micro Bright Seven Segment Displays, 10 mm Seven Segment Displays, 7.6 mm/10.9 mm Seven Segment Displays, 14.2 mm Seven Segment Displays, or High Light Ambient Seven Segment Displays data sheets.

Features

- Low Power Consumption
- Industry Standard Size
- Industry Standard Pinout
- Choice of Character Size
 - 7.6 mm (0.30 in), 10 mm (0.40 in), 10.9 mm (0.43 in),
 14.2 mm (0.56 in), 20 mm (0.80 in)
- Choice of Colors
 - AlGaAs Red, High Efficiency Red (HER), Yellow, Green
- Excellent Appearance
 - Evenly Lighted Segments
 - ±50° Viewing Angle
- Design Flexibility
 - Common Anode or Common Cathode
 - Single and Dual Digit
 - Left and Right Hand Decimal Points
 - ±1. Overflow Character
- Categorized for Luminous Intensity
 - Yellow and Green Categorized for Color Use of Like Categories Yields a Uniform Display
- Excellent for Long Digit String Multiplexing

Note

 $^{1. \}quad \text{Universal pinout brings the anode and cathode of each segment's LED out to separate pins. See internal diagrams L or W.}\\$

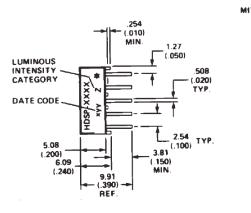

Part Numbering System

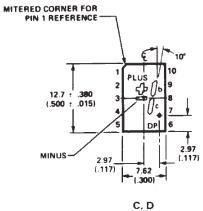

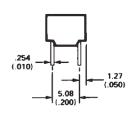

- 1. For codes not listed in the figure above, please refer to the respective datasheet or contact your nearest Avago representative for details.
- 2. Bin options refer to shippable bins for a part number. Color and Intensity Bins are typically restricted to 1 bin per tube (exceptions may apply). Please refer to respective datasheet for specific bin limit information.

- 1. Device case temperature is 25°C prior to the intensity measurement.
- 2. The digits are categorized for luminous intensity. The intensity category is designated by a letter on the side of the package.
- 3. The dominant wavelength, Id, is derived from the CIE chromaticity diagram and is the single wavelength which defines the color of the device.
- 4. Typical specification for reference only. Do not exceed absolute maximum ratings.
- 5. The yellow (HDSP-A800) and Green (HDSP-A900) displays are categorized for dominant wavelength. The category is designated by a number adjacent to the luminous intensity category letter.

Note

All categories are established for classification of products. Products may not be available in all categories. Please contact your Avago representatives for further clarification/information.

Electrical/Optical

For more information on electrical/optical characteristics, please see Application Note 1005.

Contrast Enhancement

For information on contrast enhancement, please see Application Note 1015.

Soldering/Cleaning

Cleaning agents from the ketone family (acetone, methyl ethyl ketone, etc.) and from the chlorinated hydrocarbon family (methylene chloride, trichloroethylene, carbon tetrachloride, etc.) are not recommended for cleaning LED parts. All of these various solvents attack or dissolve the encapsulating epoxies used to form the package of plastic LED parts.

For information on soldering LEDs, please refer to Application Note 1027.
